ARTIFICIAL TURF MAINTENANCE INSTRUCTIONS:

Proper care will keep your artificial turf looking great and performing well for many years.

Routine Cleaning:

- Remove debris regularly such as leaves, sticks, and dirt using a leaf blower, plastic rake, or broom.
- Rinse occasionally with a garden hose to remove dust, pollen, or spills—especially in high-use areas.
- Avoid metal rakes or sharp tools that may damage the turf fibers.

Brushing & Fluffing:

- Brush turf against the grain every 4–6 weeks in high-traffic areas.
- Use a stiff push broom or turf brush to keep fibers standing upright.
- Brushing helps maintain a natural appearance and prevents matting.

Pet Turf Care:

- Pick up solid waste promptly.
- Rinse areas where pets urinate with water to reduce odors.
- For extra freshness, use a turf-safe enzyme cleaner as needed.
- Avoid harsh chemicals or bleach unless recommended by your installer.

Spill & Stain Removal:

- Blot spills immediately with a towel or paper towel.
- Clean most stains using mild soap and warm water.
- For tougher spots (oil, grease, sunscreen), use a diluted vinegar solution or turf-approved cleaner.
- Rinse thoroughly after cleaning.

Weed & Pest Prevention:

- Artificial turf greatly reduces weeds, but occasional growth around edges may occur.
- Remove weeds by hand or use a water-based, turf-safe weed killer.
- Proper drainage and installation help prevent pests; avoid standing water.

Protecting Your Turf:

- Do not place hot items like fire pits, grills, or fireworks directly on turf.
- Avoid dragging heavy furniture across the surface.
- Use pads or plywood under heavy objects to prevent compression.
- Do not drive vehicles or heavy equipment on the turf.

Seasonal Tips:

- Turf is designed to handle all weather conditions.
- In extreme heat, lightly misting with water can cool the surface.
- In winter climates, let snow melt naturally or use a plastic shovel—never metal.

Long-Term Care:

- Inspect seams and edges once or twice a year.
- If infill settles over time, additional infill may be added by a professional.
- Schedule professional maintenance if heavy use areas start to flatten.
